

CYBERFORT

Cyberfort Group

The Cyberfort Group is a world-class cybersecurity organisation that offers a matrix of global cyber services and products that ADD value to your business.

ADVISE - Cyber Consulting services

DETECT - Penetration Testing services

DEFEND - Hosting and SOC services

Growth matters to all businesses. We understand that security done well will enable and support your business growth. Wherever you are on your cybersecurity journey, Cyberfort's people are a trusted extension to your teams. We provide you with a holistic, organisation-wide view of your business, equipping you with the facts you need to make informed decisions about your IT, security, migration plans and compliance.

We translate our security delivery back into business language. Our long-term partners rely on us to assist them with allocating resources and investment into appropriate and proportionate strategies, ensuring we meet your goals and ADD value to your business.

Cyber is all we do. Our matrix of services has developed through the acquisition of some of the industry's most skilled cybersecurity SMEs. Collectively being in the market for over thirty years, we have always been agile and current.

Our partners range from the largest of HMG departments, to non-departmental public bodies including projects of critical national infrastructure status. Our private sector work is equally wide-ranging, including blue-chip and FTSE companies, SMEs and agile technology start-ups.

The Group has offices in five locations throughout the UK and a global client base. For a refreshing approach to Cyber, contact us today. We look forward to enhancing your journey in Cyber.

ADVISE

Cyberfort understands risk. Our **ADVISE** service provides you with a realistic view of the risks your business faces and we do this in quantifiable and objective terms. After all, managing risk is a balancing act between avoiding threats and missing out on positive opportunities.

The people you meet for your initial consultation will work closely with you throughout our engagement to help you understand your business, cyber and data-related risks and where you should focus your available resources. We'll provide practical advice, and help you implement pragmatic solutions that will keep your business engine running smoothly, generating profit and growth, while keeping risk at a level you're comfortable with.

DETECT

Cyberfort's **DETECT** service is designed to give you the confidence that the technology you are using or developing is as secure as it possibly can be. Whether you are developing software for your clients, designed to hold their customers' data, or you want to ensure your own infrastructure is secure, you need to test your technology for vulnerabilities.

This is done by carrying out a penetration or 'pen test' of your IT infrastructure. Cyberfort pen testers are renowned for finding system vulnerabilities other pen testers just haven't dug deep enough to uncover. We tell you what you don't know, not what you know already, allowing you to make informed decisions about where best to invest your resources and budget.

We share our knowledge with you, and empower you to move forward with robust security processes in place. Cyberfort will give you the confidence that your technology is as secure as it is possible to be, and that your technology is absolutely ready to go to market.

DEFEND

Our **DEFEND** services are designed to enable your business to grow and be more successful. We ensure your mission-critical data is always secure and available. Our approach is personal. We partner with you, becoming a trusted extension of your team and designing bespoke solutions that enable you to grow and meet your business objectives.

Our **DEFEND** services include public cloud and bespoke technical solution architecture, managed public and private clouds, hosting, colocation services (including secure and managed suites) and a range of Security Operations Centre (SOC) services.

Let us take care of your infrastructure and compliance needs, so that you can dedicate your time and resources to growing your business.
