Cyberfort

Cyberfort Cloud: MCX

Elevate Your Experience
Secure, Scalable, and Trusted Cloud Platforms

Cyberfort MCX gives cloud cost certainty and the option to scale according to demand. This results in less cloud wastage and improved ROI from cloud investments.

Providing secure, flexible cloud platforms with cost certainty assurance, whatever your requirements

Designed on hyperconverged infrastructure to maximise throughput, minimise exposure, and guarantee availability, Cyberfort's Cloud Platform, MCX, provides highly resilient, performant and secure cloud services, monitored and managed by our in-house UK support teams.
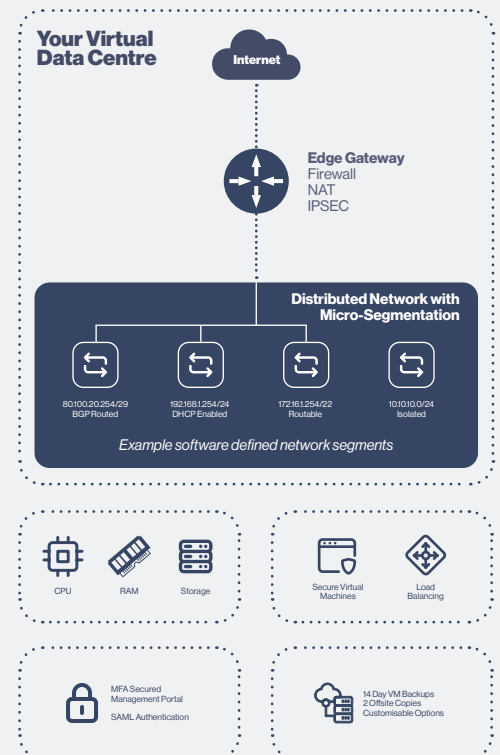

Choosing Cyberfort MCX for hosting your business services is the simplest way to get online securely, at predictable cost. Cloud computing with us brings economies of scale, combined with our trusted expertise in security.

Your own Virtual Data Centre (VDC) hosted on Cyberfort MCX delivers a fully integrated, software-defined platform, enabling seamless management of compute, storage, and network resources for scalable, secure, and agile cloud operations.

Secure and segregated, compute and storage resources, managed and delivered within a leading multi-tenant infrastructure

Your Virtual Data Centre

Internet

Edge Gateway
Firewall
NAT
IPSEC

Distributed Network with Micro-Segmentation

80.100.20.254/29
BGP Routed

192.168.1.254/24
DHCP Enabled

172.16.1.254/22
Routable

10.10.10.0/24
Isolated

Example software defined network segments

CPU   RAM   Storage

Secure Virtual Machines   Load Balancing

MFA Secured Management Portal
SAML Authentication

14 Day VM Backups
2 Offsite Copies
Customisable Options

Key Benefits

- Expert guidance to tailor your platform precisely to your requirements
- Predictable Cloud Costs and zero data transfer fees
- Securely designed platforms built to industry best practices
- Flexible and infinitely scalable resources
- Resilient network and power redundancy for uninterrupted performance
- Best in class migration services with certified cloud expertise
- UK-based, ex-military nuclear bunker data centres, offering 24/7/365 protection and management to ensure UK data sovereignty and security

Cyberfort has really helped us break down barriers with the large corporates and has convinced them to store their sensitive data outside their own sites.

Jim Stanley, Managing Director
NEXUM SOFTWARE

Over 20 years of experience delivering managed services

Our team is skilled across leading cloud platforms with certifications

Trusted to deliver resilient, scalable and tailored solutions

Features

- Integrated and offsite backups as standard
- Infrastructure monitoring 24/7/365
- Micro-segmentation and Network Isolation
- Intuitive customer management portal
- Containerisation services
- Load Balancing capabilities
- Disaster Recovery options
